

Practice Programs

- By Aditya Varma

Index

	Program Question
Program 1:	Printing a Pun
Program 2:	Simple Arithmetic
Program 3:	Simple Interest Calculator
Program 4:	Simple EMI Calculator
Program 5:	Student Percentage Calculator
Program 6:	Gross Salary Calculator
Program 7:	Calculate Area of Shapes
Program 8:	Calculate Area & Circumference of Circle
Program 9:	Calculate Dimensional Weight of a Box
Program 10:	Convert Celsius into Fahrenheit
Program 11:	Convert Fahrenheit into Celsius
Program 12:	Convert Celsius into Kelvin
Program 13:	Convert Kelvin into Celsius

Program 1: Write a C program to print the following text message each time it is run.
'To C, or not to C: that is the question.'

pun.c :

```
1  #include <stdio.h>
2
3  int main(void) {
4      printf("To C, or not to C: that is the question.\n");
5      return 0;
6  }
```

Program 2: Write a C program to demonstrate simple arithmetic.

simpleArithmetic.c

```
1  #include<stdio.h>
2
3  int main(){
4      int a, b, c;
5
6      printf("Please enter two numbers : ");
7      scanf("%d %d", &a, &b); //ok
8
9      c = a + b; //addition
10     printf("The Sum is %d\n", c);
11
12     c = a - b; //subtraction
13     printf("The Difference is %d\n", c);
14
15     c = a * b; //multiplication
16     printf("The Product is %d\n", c);
17
18     c = a / b;
19     printf("The Division is %d\n", c);
20     return 0;
21 }
```

Program 3: Write a C program to calculate Simple Interest.

simpleInterestCalculator.c

```

1  #include<stdio.h>
2
3  int main(){
4      int numberOfYears;
5      float principleAmount, rateOfInterest, simpleInterest;
6
7      printf("Enter Principle Amount\n", principleAmount);
8      scanf("%f", &principleAmount);
9      printf("Enter number of year\n", numberOfYears);
10     scanf("%d", &numberOfYears);
11     printf("Enter Rate of Interest\n", rateOfInterest);
12     scanf("%f", &rateOfInterest);
13
14     simpleInterest = (principleAmount * numberOfYears * rateOfInterest) / 100;
15     printf("Simple interest is %f\n", simpleInterest);
16
17     return 0;
18 }
19

```

Program 4: Write a C program to calculate Simple EMI.

simpleEMICalculator.c

```

1  #include <stdio.h>
2  #include <math.h>
3
4  int main() {
5      float principle, rate, time, emi;
6
7      printf("Enter principle amount: ");
8      scanf("%f", &principal);
9
10     printf("\nEnter rate of interest: ");
11     scanf("%f", &rate);
12
13     printf("\nEnter time in years: ");
14     scanf("%f", &time);
15
16     rate = rate / (12 * 100); /*one month interest*/
17     time = time * 12; /*one month period*/
18
19     emi= ( principal * rate * pow(1 + rate,time)) / (pow(1 + rate,time) - 1);
20
21     printf("Monthly EMI is= %f\n", emi);
22
23     return 0;
24 }
25

```

Program 5: Write a C program to calculate Student Percentage of 5 subjects

studentPercentageCalculator.c

```

1  #include<stdio.h>
2
3  int main() {
4      int a,b,c,d,e;
5      float total, average, percentage;
6
7      printf("Enter marks of 5 subjects : \n");
8      scanf("%d %d %d %d %d", &a, &b, &c, &d, &e);
9
10     total = a + b + c + d + e;
11     average = total / 5;
12     percentage = (total / 500) * 100;
13
14     printf("Total marks = %f\n", total);
15     printf("Average marks = %f\n", average );
16     printf("Net percentage = %f\n", percentage);
17     return 0;
18 }
19

```

Program 6: Write a program taking user input of basic salary and calculating gross salary that includes basic salary, 50% DA and 40% HRA.

grossSalaryCalculator.c

```

1  #include<stdio.h>
2
3  void main() {
4      float basic,hra,da,gross;
5
6      printf("Enter the Basic Salary : $");
7      scanf("%f", &basic);
8
9      hra = 40 * basic / 100;
10     da = 50 * basic / 100;
11     gross = basic + hra + da;
12
13     printf("Gross Salary is $%f", gross);
14 }
15

```

Program 7: Write a program to calculate area of Square, Triangle & Rectangle using user inputs of shape data.

areaOfShapes.c

```

1  #include <stdio.h>
2
3  void main() {
4      float area;
5      float side; //For square
6      float base, height; //For triangle
7      float length, breadth; //For rectangle
8
9      //Area of square
10     printf("Enter the side of square in cms: ");
11     scanf("%f", &side);
12     area = side * side;
13     printf("Area of square with sides %.2f cms is %f\n", side, area);
14
15     //Area of Triangle
16     printf("Enter the base of triangle in cms : ");
17     scanf("%f", &base);
18     printf("Enter the height of triangle in cms : ");
19     scanf("%f", &height);
20     area = 0.5 * base * height;
21     printf("Area is of triangle with base %.2fcms and height %.2fcms is %fcms\n", base, height, area);
22
23     //Area of Rectangle
24     printf("Enter the length of rectangle in cms : ");
25     scanf("%f", &length);
26     printf("Enter the breadth of rectangle in cms : ");
27     scanf("%f", &breadth);
28     area = length * breadth;
29     printf("The area of rectangle with length %.2fcms and breadth %.2fcms is %fcms\n", length, breadth, area);
30 }

```

Program 8: Write a program to calculate Area & Circumference of a Circle, take user inputs.

areaAndCircumference.c

```

1  #include<stdio.h>
2
3  int main() {
4      float radius, area, circumference;
5
6      printf("Enter the radius of Circle in cms : ");
7      scanf("%f", &radius);
8
9      area = 3.14 * radius * radius; //Area of circle
10     circumference = 2 * 3.14 * radius; //Circumference of circle
11
12     printf("Area of circle is %f\n", area);
13     printf("Circumference of circle is %f\n", circumference);
14     return 0;
15 }
16

```

Program 9: Write a program to calculate Dimensional weight of a box to help shipping companies charge accordingly.

dimensionalWeight.c

```

1  /*The problem is about calculating the dimensional weight of a box,
2     which shipping companies use to charge based on space taken rather
3     than actual weight. The formula divides the box's volume by 166,
4     but since integer division in C truncates decimals (rounds down),
5     we adjust by adding 165 before dividing to properly round up.*/
6
7  #include <stdio.h>
8
9  int main(void) {
10     int height, length, width, volume, weight;
11
12     printf("Enter height of the box: ");
13     scanf("%d", &height);
14     printf("Enter length of the box: ");
15     scanf("%d", &length);
16     printf("Enter width of the box: ");
17     scanf("%d", &width);
18
19     volume = height * length * width;
20     weight = (volume + 165) / 166;
21
22     printf("Volume of box is %d (cubic inches)\n", volume);
23     printf("Dimensional weight of the box is %d pounds\n", weight);
24 }

```

Program 10: Write a program to convert the user given temperature in Celsius(*C) into Fahrenheit(*F).

celsiusToFahrenheit.c

```

1  /* Converts a Celsius temperature to Fahrenheit */
2
3  #include<stdio.h>
4
5  #define FREEZING_PT 32.0f
6  #define SCALE_FACTOR (5.0f / 9.0f)
7
8  int main() {
9      float celsius, fahrenheit;
10
11      printf("Enter the Temperature in Celcius : ");
12      scanf("%f", &celsius);
13
14      fahrenheit = SCALE_FACTOR * celsius + FREEZING_PT;
15
16      printf("Temperature in Fahernheit is %.1f", fahrenheit);
17  }
18

```

Program 11: Write a program to convert the user given temperature in Fahrenheit(*F) into Celsius(*C).

fahrenheitToCelsius.c

```

1  /* Converts a Fahrenheit temperature to Celsius */
2
3  #include <stdio.h>
4
5  #define FREEZING_PT 32.0f
6  #define SCALE_FACTOR (5.0f / 9.0f)
7
8  int main() {
9      float fahrenheit, celsius;
10
11      printf("Enter Fahrenheit temperature: ");
12      scanf("%f", &fahrenheit);
13
14      celsius = (fahrenheit - FREEZING_PT) * SCALE_FACTOR;
15
16      printf("Celsius equivalent: %.1f\n", celsius);
17
18      return 0;
19  }

```

Program 12: Write a program to convert the user given temperature in Celsius(*C) to Kelvin(*K).

celsiusToKelvin.c

```

1  /* Converts a Celsius temperature to Kelvin */
2
3  #include <stdio.h>
4
5  #define SCALE_FACTOR 273.15
6
7  int main()
8  {
9      float celsius, kelvin;
10
11     printf("Enter the Temperature in Celcius : ");
12     scanf("%f", &celsius);
13
14     kelvin = celsius + SCALE_FACTOR;
15
16     printf("Temperature in Kelvin is %.2f k\n", kelvin);
17     return 0;
18 }
```

Program 13: Write a program to convert the user given temperature in Kelvin(*K) into Celsius(*C).

kelvinToCelsius.c

```

1  /* Converts a Kelvin temperature to Celsius */
2
3  #include <stdio.h>
4
5  #define SCALE_FACTOR 273.15
6
7  int main()
8  {
9      float celsius, kelvin;
10
11     printf("Enter the Temperature in Kelvin : ");
12     scanf("%f", &kelvin);
13
14     celsius = kelvin - SCALE_FACTOR;
15
16     printf("Temperature in Celsius is %.2f C\n", celsius);
17     return 0;
18 }
```

Program 14: Write a program to accept the distance between two cities in kilometres from the user. Calculate and display this distance in meters, feet, centimetres and inches

distanceConverter.c

```
1  #include<stdio.h>
2  #include<conio.h>
3
4  void main() {
5      float km, mt, inch, ft, cm;
6
7      printf("Enter the distance between two cities in kilometers : ");
8      scanf("%f", &km);
9
10     mt = km * 1000;
11     ft = mt * 3.33;
12     cm = mt * 100;
13     inch = ft * 12;
14
15     printf("The distance in meters is = %.2f mts.\n", mt);
16     printf("The distance in feets is = %.2f ft.\n", ft);
17     printf("The distance in centimeters is = %.2f cms.\n", cm);
18     printf("The distance in inchs is = %.2f inches.\n", inch);
19 }
```
